Abaco™ tropical hardwood decking, from Aljoma Lumber, has a contemporary European design that features a traditional smooth finish on one face and an elegant moulded surface on the other. The moulded surface makes each board slip-resistant and cooler on the feet.

Abaco is available in both grooved and traditional boards. Grooved boards allow for quick and easy installation of hidden fasteners. Use hidden fasteners designed for tropical hardwood that gap each board and allow for natural expansion and contraction.

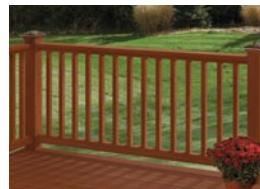

By using a hidden fastener on Abaco, virtually all pre-drilling is eliminated, making installation a breeze. And the end result is a beautifully smooth and durable, fastener-free surface.

Abaco is competitively priced compared to Ipe and other tropical hardwoods and is available in a rich mahogany color that resembles Ipe.

REAL HARDWOOD. REAL BEAUTY. REAL VALUE.

Abaco is the perfect choice for a beautiful wood deck, thanks to its natural ability to resist rot, decay, termites, splintering, twisting and cracking.

Abaco also features all the deck railing components needed to construct a beautifully matched railing. Abaco railing components include balusters, handrails and end posts.

The species used in Abaco are abundant, have fine textures and are dense, naturally strong, extremely durable, and will provide an elegant exotic look for years to come. Abaco tropical hardwoods are kiln-dried for exterior use and have a superior fire rating when compared to redwood, cedar and pressure-treated lumber.

Because Abaco is all-natural, it does not need to be chemically treated. And best of all, it's environmentally friendly.
